

# Evaluating and Planning for Security Risks

## course outline

**Information security is crucial for all types of organisations. In this course, you'll learn about evaluating potential security risks and planning for their mitigation.**

### IS THIS COURSE FOR YOU?

This course is designed as an introductory-level information security course for anyone looking to develop an understanding of essential information security concepts.

### ABOUT THE COURSE

Familiarity with the essential concepts associated with IT infrastructure and information security risk enables IT professionals to identify, evaluate, and prioritise security risks. In this course, you'll get to know the terminologies, activities, and concepts associated with the security risk management process.

As you might expect, effective security risk management often begins with proper security risk identification. In the course, you'll examine various components of the risk identification process and different techniques used to identify risk. You'll explore the assessment, classification, and prioritisation of security risks. And you'll identify the activities involved in the risk management process, the importance of risk strategies in the context of work environments, and essential decisions required for managing security risks effectively.

### AIMS AND OBJECTIVES

This course is designed to further and deepen your introduction to core information security concepts.

### PRE-REQUISITES

There are no pre-requisites for this course.

### COURSE CONTENT

**Module 1 - Key Risk Terms & Concepts**

**Module 2 - Performing Security Risk Identification**

**Module 3 - Performing Security Risk Assessments**
